

Steadicam award-winning Camera Stabilizing Systems allow you to improve the quality of all of your film and video applications. Now you can have steady, smooth, uninterrupted motion, without expensive cranes, dollies or booms. Wherever the shoot, whatever the application, the Steadicam will make it better with a unique feel and look that sets you apart from the competition.

The ProVid^{HD} is wired by the factory to accept all High definition signals. Through the addition of the HD UltraBriteTM virtually all component high definition signals plus standard NTSC / PAL / SECAM composite signals may be displayed. Imagine all this capability in one low cost unit without the need for two separate monitors.

The main components of the Steadicam system include the Vest, the Arm and the Sled. These components work simultaneously to produce a finely tuned system of properly distributed mass. The system balances with the center of gravity precisely placed at the floating gimbal handle assembly to achieve flawless dynamics.

An Ultra-light monocoque carbon fiber housing maintains a base sled weight of less than ten pounds. The dual-action, no-tools Iso-elasticTM arm provides a wider range of shooting possibilities. A high-performance 4" green screen monitor with 4:3 aspect ratio switchable to 16:9 is visible in direct sunlight. HD UltraBriteTM monitor is optional.

The ProVid^{HD} offers the same fluid motion, uninterrupted shots and professional, natural feel as the larger rigs, at a cost that's truly affordable for virtually any video professional.

ProVid^{HD} System Includes:

- ProVid vest with socket block
- Camera mounting chassis
- HD and standard composite signal capable
- Composite center 15"-24" telescoping Post
- High performance monitor: 4" CRT with 4:3 aspect ratio
- 15-26 pound camera capacity dual Iso-elastic Arm with Master Series style Mating Block interconnect
- Dynamic spin and docking bracket
- Battery Mount (Anton Bauer or PAG)
- Dovetail plate
- 12v power cable
- 3 foot lightweight BNC video cable
- T-handle Allen wrench
- Wheeled hard case with retractable handle
- Instructional VHS training tape
- Owner's manual

Steadicam ProVid^{HD} with HD UltraBriteTM Monitor

Paul Taylor
Steadicam Owner/Operator

The **ProVid^{HD}** is a lightweight, commercial-quality Steadicam. It is versatile and affordable, making it the perfect choice for television stations, production companies, or videographers shooting industrials, documentaries or commercials.

The **ProVid** is also an excellent system to be used with the newer lightweight 12 volt film cameras such as the Aaton 35 III.
