- **Works with tungsten, flash and natural light**
- **Works in the studio and on location, indoors and out**
- **Five year warranty**

5 'N 1 Multi-POPS

The 5 'N 1 Multi-POPS system is Tiffen's newest addition to the line of Stroboframe POPS reflectors. This system includes five of the most popular reflectors in one: Gold, Zebra (Gold & White), Silver, White, and Translucent.

Portable light modifiers are definitely one of the easier, more convenient ways to get dramatically better photographic results! If you're at all serious about photography the 5 'N 1 Multi-POPS system is ideal to have with you whenever you're shooting.

To use, simply take the product out of its carry case and it will automatically pop up flat to expose two reflective surfaces: either white and silver, or gold and zebra gold. If the surface you want to use is showing, the Multi-POPS is ready to use. If you want a surface that is not showing, just unzip, turn inside out, rezip and you're all set! It's that simple!

Using the white side provides soft, natural light that fills shadows and boosts highlights. Silver gives a high-contrast image that's best for video, B&W and product photography. Gold warms up any scene including the shadow areas and can be used to add a sunset effect. Zebra combines gold and silver in a zigzag pattern creating a gentle warm tone ideal for beautiful skin tones in fashion shots and portraits. Translucent is used to diffuse light, creating a soft effect perfect for outdoor portraits.

The 5 'N 1 system is available in 32" (medium) and 42" (large) diameters in its own carry case.

Compare POPS to the competition in terms of the durability and reflectivity of our fabrics, the strength of our foldable steel frames, and the color choices, and then compare prices—you'll see our value is unbeatable!

Get the lighting right, right away!

With the 5 'N 1 Multi-POPS you have a variety of creative lighting effects at your fingertips. So, you're ready to shoot immediately. There's no assembly (or disassembly) needed. There's no possibility of the "ghosting" effect caused by umbrella ribs. And, POPS can easily be used in hard-to-light situations where there's limited space.

Stroboframe POPS light modifying reflectors are also available individually in 22", 32" & 42" in Silver/White, Gold/White, Silver/Gold, Translucent and Zebra (Gold and White/White).
